

Canfit Design v20.0

What's New

The inventor of CAD/CAM for O&P | **30+** years exclusive focus | **800+** installations in **45** countries

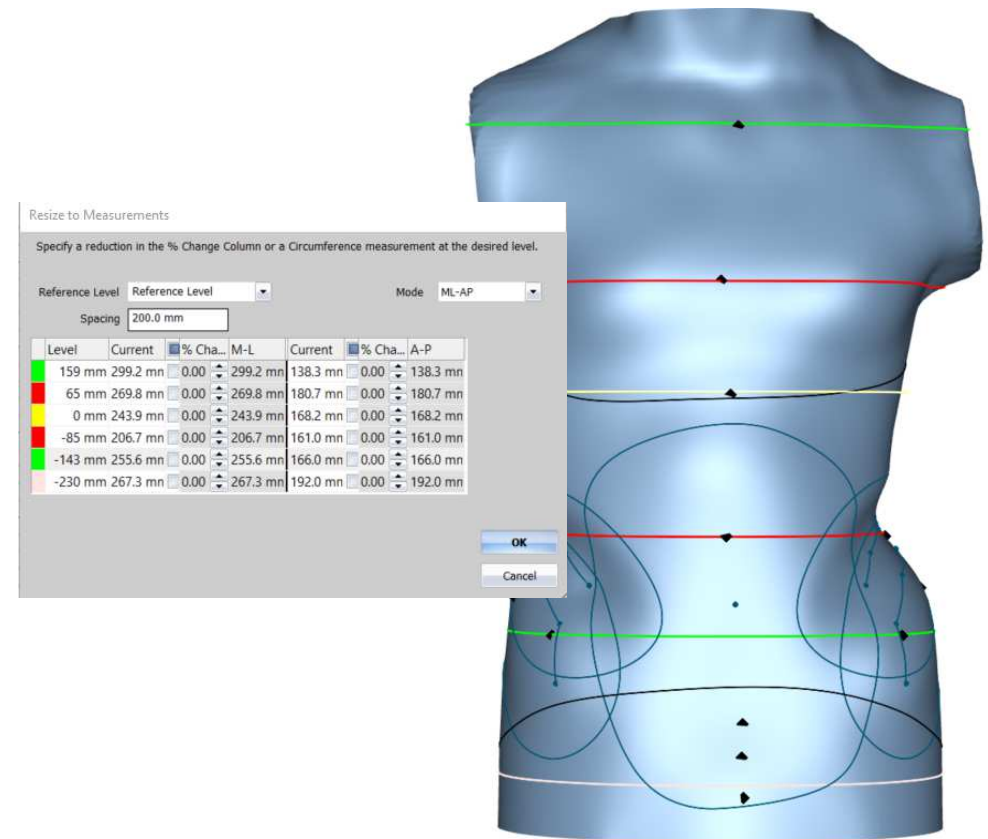

Canfit 20 - Cloud Licensing

- License Entitlement is set in the cloud
- Fast and easy setup with fewer interactions with Vorum Support
- For license transfer, simply inform Vorum Support of the switch, and the entitlement will be freed up for another computer.

Canfit 20 – Resize to Measures

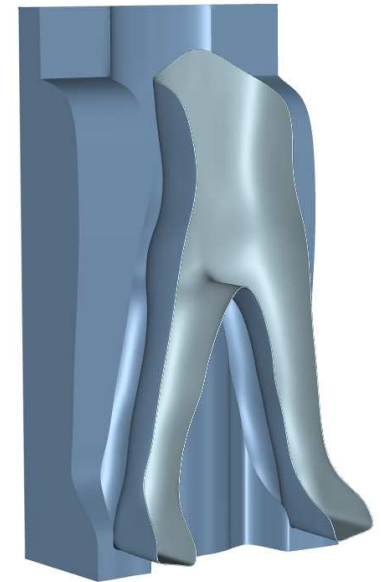

- Resize the shape to your target measurements in a single step:
 - Circumference
 - Anterior/Posterior
 - Medial/Lateral
- Adjust measure levels to key landmarks
- Program routine adjustments into your design Macro

Canfit 20 – Seat Cushion Design

- Design Seat Cushions within Canfit from a library or scan file
- Can be used to create custom mattresses based on standing shell library

Canfit 20 – Branches and Mesh Standing Shells

- Mesh-based library for standing shells improve quality of designs
- Also, with Branches, for any mesh shape with different limbs, modify one area of the shape at a time.

Canfit 20 – Tool set increased for Mesh shapes

- Improve Sand Tool for mesh shapes
- Now record overlays for mesh shapes
- Now record Macros for mesh shapes

Canfit 20 – 3D Print Hole Patterns

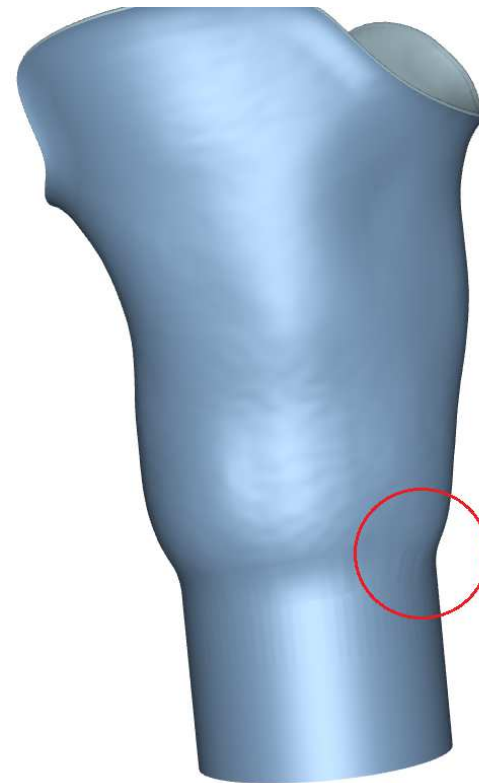

- Image-based design of hole patterns offers maximum flexibility for designing holes in 3D print shapes

Canfit 20 – 3D Print Adapter Blending

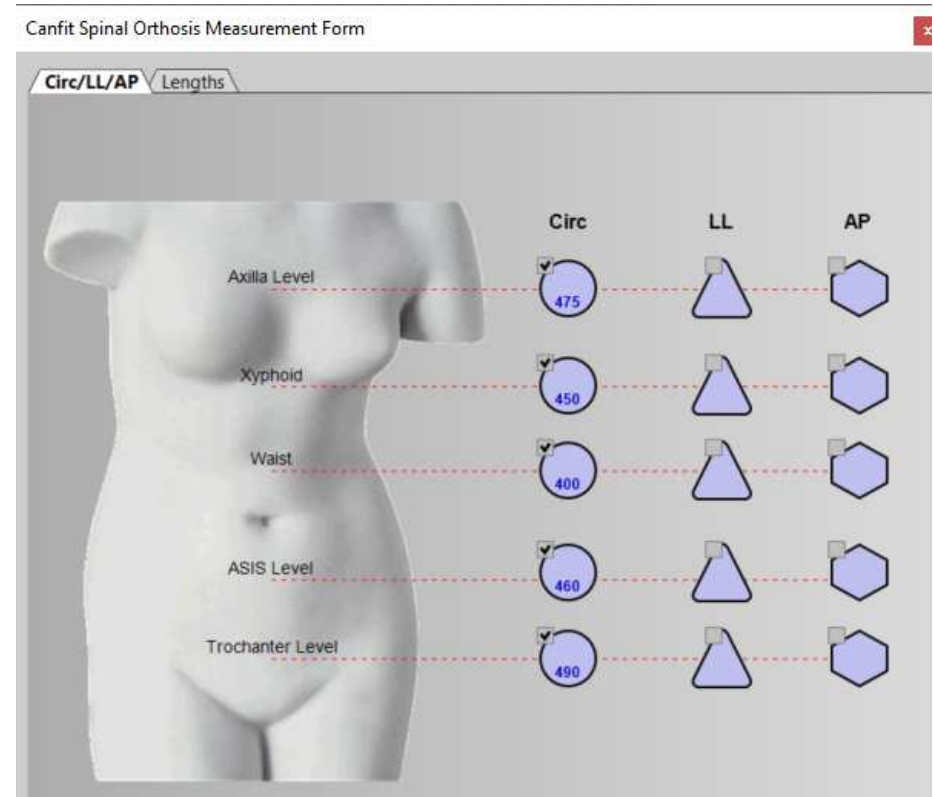

- For 3D print designs, now add a blending (also known as 'fairing') to the transition between the socket and the adapter

Canfit 20 – Measure Integration with Luma

- In Luma 3D Scanner, digitally record manual measurements that accompany the scan file.
- In Canfit, review manual measurements to aid design without external measurement sheets

Canfit 20 – Luma/Spectra Scans for Insoles

- Import VSRF scan files from your Luma or Spectra 3D scanner directly into Canfit's Insole design application.

Canfit 20 – Import/Export Landmark Names

- Export landmark names for unique references points on the shape
- Ensure everyone has the correct landmarks used in your custom overlays and macros
